

Translate Planning Goals into Project Actions

Let the Berkley Group lead you with Envision

**Several Envision credits address the planning phase and the basic question:
Is this the right project?**

Does the project fit with the community's long term development plan, preserve community character, improve mobility, and support economic growth?

Envision®: Guidance and Rating System for Sustainable Infrastructure Projects

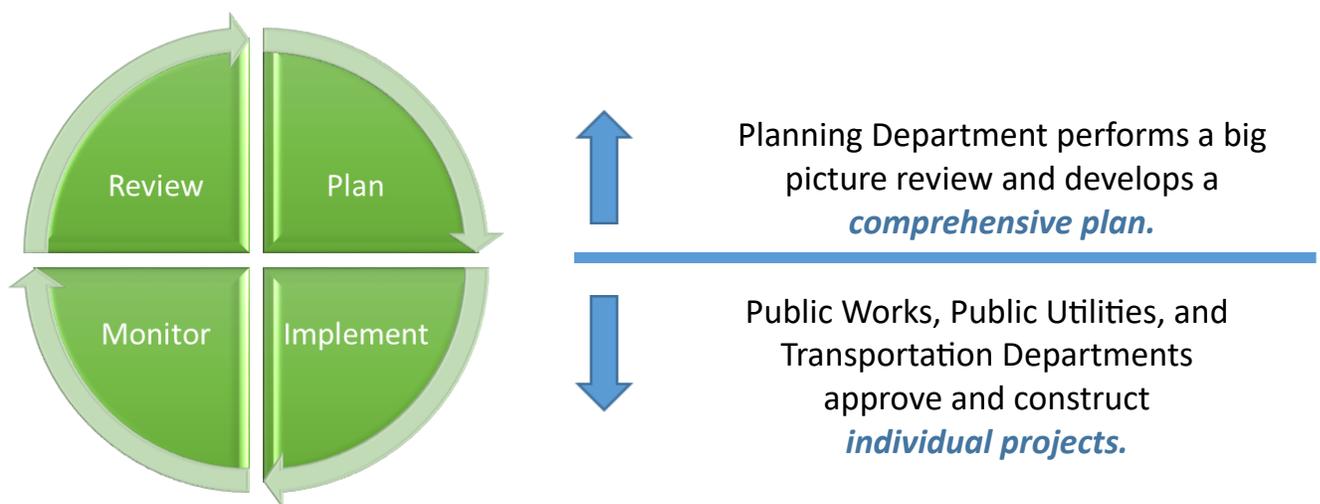

Envision is a collection of best practices to help infrastructure professionals make better decisions based on the **triple bottom line: environmental, social, and financial.**

The Envision system is parallel to the LEED green building system from USGBC, except it focuses on infrastructure instead of buildings. The sustainability concepts are adapted for implementation on **all types of infrastructure** (utilities, transportation, etc.) and address **all lifecycle phases**.

Unlike buildings, **infrastructure is more typically publicly-owned and crosses more than one parcel.** Envision includes additional sustainability concepts to address these challenges, such as stakeholder involvement, community mobility, and quality of life.

Let the Berkley Group assist you with Envision training to better plan for sustainable projects.

Contact the Berkley Group today to learn more about how we can assist you in planning for sustainable solutions.

ABOUT US

The Berkley Group is a local government consulting firm with experts specializing in the areas of local administration, executive recruitment, organizational assessment, planning, zoning, environmental program support, finance, public works, project management, community involvement, and more. We bring a collaborative approach to our projects with an array of professional resources. Our staff brings over four centuries of direct experience in local government. We have strong ties to localities and understand their unique challenges. We provide personal attention and superior service delivery to our clients.

Our Philosophy

The Berkley Group understands the need to provide excellent service delivery with limited fiscal resources. We adhere to three fundamental values:

An open and collaborative process that includes key stakeholders.

Sound technical analysis drives the final product. Our projects are based on the principles of planning, land use, demographic analysis, and economics.

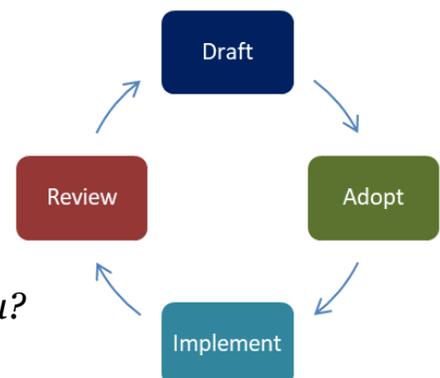

Being responsive, flexible, open, creative, and cooperative produces the greatest possible outcome.
